

Our Safety Commitment

Our dedication to providing safe high quality products has been a founding principle of University Games throughout our long history.

Manufacturing products for children is not all fun and games. The safety requirements for children's products is serious business and you can be assured we keep current on the regulatory activity surrounding our industry to ensure we are current on all issues affecting toys and children's products.

The key to consistently delivering safe, high quality products is ensuring safety and quality is a consideration throughout every stage of the manufacturing process from the conception stage to delivery of product to the end consumer. Our quality and design teams work together to ensure safety considerations are addressed early on in development. We work with some of the best manufacturers in our industry and partner with them to ensure they have a full understanding of University Games safety and quality expectations.

Our rigorous testing process includes working with Consumer Product Safety Commission accredited third party laboratories to certify that all University Games products meet or exceed regulatory standards. As a global company we test our products to international standards where applicable.

As we continue to build our brands and expand our product categories you can be assured we are applying the same stringent standards for safety and quality you have come to expect from University Games.

We welcome your feedback. Should you have a quality concern please feel free to contact us at: info@ugames.com
