Object:

Collect one state flag in each of the six colored regions by correctly answering geography questions and return to the state in which you started.

Set-Up:

- Separate the State Flag Tokens and position them beside the game board so all flags are visible.
- Separate the Challenge Tokens and give one to each player.
- Separate the Card Decks so that 3rd & 4th Grade questions are in one pile and 5th Grade & Up questions are in another pile. Place question card piles on the side of the game board opposite the Flag Tokens.
- Each player is given one Score Card.

NOTE: Alaska and Hawaii are NOT drawn to scale. When moving in the Northeast/New England states (Maine, Rhode Island, etc.), players place pawns on state names. Alaska and Hawaii are considered one space each. The Pacific Ocean is not considered a space while moving to Alaska and Hawaii.

Play the Game:

1. Each player selects a pawn and is given a Challenge Token. At the beginning of the game, players decide which level questions they will be answering.
 - a. Level 1 - 3rd & 4th Grades (8 & 9 year olds)
 - b. Level 2 - 5th Grade & Up (10 year olds & up)
2. All players place their pawns on the state of their choice.
3. Players move from state-to-state the amount rolled on the dice. Players cannot land on the same state twice in one turn.
4. Each state may not have more than one pawn on it at a time.
5. Each player rolls the die. The player with the highest roll (Player 1) plays first. He/she rolls the die again and moves from state-to-state the specific number on the die.
6. Player 1 is read a question by the player to his/her right.

Note: If the answer includes information in parentheses (...) this information should not be read until after an answer is chosen. This information explains the correct answer to the question.

7. If Player 1 answers the question correctly, he/she will be given the State Flag Token of the state on which he/she landed. His/her turn is over. Play moves clockwise.
8. If Player 1 answers incorrectly, his/ her turn is over.
9. If a player lands on a state for which he/she already has a flag OR is the same color of a state he/she already has on the Score Card, the player is asked a question. If he/she answers the question correctly, he/she can roll the die again and move the number rolled on the dice and his/her turn is over. At the beginning of his/her next turn, he/she has an option of either answering a question card right away or rolling the dice and moving to another state to answer a question card. If he/she answers incorrectly, his/her turn is over.
10. No player can have more than one State Flag Token per colored region on his/her score card.

Challenge Token:

1. A Challenge Token is used to take away from another player a State Flag Token from his/her score card.
2. The player who is redeeming a Challenge Token (the Challenger) must go to the state that he/she is challenging to take. This player has a choice of either answering a question card in his/her grade range or having the player being challenged (the Opponent) answer a question card in his/her grade range.
3. If the Challenger answers correctly, he/she takes the Opponent's State Flag Token and either places it on his/her Score Card or returns it back to the flag area (if he/she already has a flag in that colored region). Once a Challenge Token is used, it is placed back in the box.
4. If the Opponent answers correctly, he/she gets to keep the State Flag Token. If the Opponent answers incorrectly, the Challenger takes the flag. The Challenger then must place his/her token back in the box and his/ her turn is over.
5. Once a Challenge Token has been redeemed it cannot be used again.

Winning the Game:

The first player to get one of each of the six (6) different colored State Flag Tokens and return to his/her starting state wins the game.
